

TSUNAMI ALX

FRAME CONSTRUCTION

The signature frame construction of our rigid frame chairs is like nothing else. You will not feel anything else like it, ever, because it is 20% stiffer and stronger than other aluminum rigid frames on the market. The lightweight ultra-stiff 7000 series 1³/₈" tubing is the ideal combination of vibration dampening and rigidity.

CRESCENT CG SYSTEM

Hidden inside your Tsunami, the simple yet ingenious Crescent CG system keeps the side frame free of excess hardware, while providing infinite adjustability. It is this infinite adjustability that allows you to position the CG anywhere along the side frame without worrying about interference with the backrest hardware or aftermarket seating system. Comfort just got easier.

TUBULAR COMPONENT SYSTEM

TCS provides individual seat height settings without the clutter of extra metal and hardware. Seat heights are adjustable up and down in 1/4" increments giving you a sleek, clean chair. Also, by using the tubular components we greatly increase the lateral stiffness of the chair resulting in a stiffer, more responsive ride.

YOUR BEST OPTION

in low cost ultra-light rigid wheelchairs.

SPECIFICATIONS

Transport Weight:	11.2 lbs.
Standard Weight:	18.8 lbs.
Seat Width:	14"-22"
Seat Depth:	14"-22"
